SR1211-3 CADAVER STORAGE RACK

STAINLESS STEEL CONSTRUCTION

All posts, supports and frame rails are made from Type 304 stainless steel

CONFIGURABLE

The SR1211-3 Series body storage racks can be configured to meet your exact needs. They are available for all sizes of Scientek MT Series body trays and can be manufactured to allow other manufacturer's trays as well.

MODULAR CONSTRUCTION

The modular construction allows the SR1211-3 racks to be assembled on site without the need for welding. This also allows the units to be relocated, reconfigured or added on to easily.

The Scientek SR1211-3 is a large capacity storage rack system. This is ideal for coroner's offices and university anatomy systems. The design allows the cadaver to remain on the body tray from receiving through final disposition. This provides an ergonomic advantage for the staff as well as reduces the risk of cadaver misidentification.
